SUMMARY

Backend-focused PHP/Laravel Engineer with 4+ years of experience building secure, maintainable, and business-critical applications. Experienced in REST APIs, MySQL, Redis, transactional workflows, event-driven architecture, and multi-tenant systems. Strong focus on correctness, idempotency, testing, clean architecture, and domain modeling. Open-source maintainer and contributor with published Laravel packages and contributions to established projects.

PROFESSIONAL EXPERIENCE

Full-Stack PHP/Laravel Engineer

Oct 2024 – Present

Sentients AI

- Design and maintain Laravel applications using PHP, MySQL, Redis, and Vue.js with emphasis on reliability, maintainability, and scalable backend architecture.
- Integrate external REST APIs and build reliable synchronization workflows between internal systems and third-party services.
- Optimize database queries, indexing, Redis caching, and data-access patterns to improve application performance.
- Implement secure transactions and RBAC, reducing potential vulnerability surfaces by 45%.
- Develop automated tests with Pest and PHPUnit and participate in code reviews to prevent regressions.

PHP/Laravel Developer (Freelance)

2024 – Present

Client Projects

- Develop Laravel applications and RESTful APIs, including database schemas, transactional workflows, authentication, authorization, and third-party integrations.
- Integrate payment gateways, webhooks, and external APIs while handling failure and synchronization scenarios.
- Apply automated testing with Pest and PHPUnit to improve reliability and reduce regression risk.

OPEN SOURCE

Laravel Idempotency — GitHub

2026

- Developed and maintain a Laravel package preventing duplicate request execution through idempotency keys, request fingerprinting, response replay, conflict detection, and cache-based locking.
- Designed extensible storage, locking, and fingerprinting contracts with automated quality gates using Pest, PHPStan, Rector, and Laravel Pint; 93% test coverage.

Laravel Tracer — GitHub

2026 – Present

- Actively developing an application-level Laravel tracing package supporting request, query, event, and execution-context spans with pluggable storage and framework integration.

Career-Ops — GitHub • Contributor

2026

- Contributed fixes across CLI validation, content filtering, CV generation, and scan-history workflows, including multiple merged pull requests.
- Worked within an established open-source codebase using issue-driven development, pull requests, automated testing, and code review.

SELECTED PROJECTS

Madarik School Management System — Live Demo

2026

- Developed and deployed a school management platform for student records, academic workflows, reporting, and role-based access control.
- Implemented Redis-backed background processing for notifications and scheduled operations and built interactive dashboards with React.js and Inertia.js.

Modular E-Commerce System — Live Demo — GitHub

2026

- Designed and deployed a modular Laravel system separating orders, payments, inventory, and users using DDD, value objects, domain events, and business-rule isolation.
- Implemented multi-tenancy, automated query scoping, and event-driven workflows to decouple business processes.

TECHNICAL SKILLS

Languages: PHP, SQL, JavaScript **Backend:** Laravel, REST APIs, MySQL, Redis, Transactions, Caching, RBAC
Laravel: Eloquent, Sanctum, Fortify, Passport, Horizon, Telescope, Queues, Events, Middleware, Policies, API Resources, Notifications, Scheduler, Rate Limiting
Architecture: DDD, SOLID, Clean Architecture, Event-Driven Architecture, Multi-Tenancy
Frontend: Vue.js 3, React.js, Inertia.js, Livewire, Alpine.js
Testing & Quality: PestPHP, PHPUnit, PHPStan, Rector, Laravel Pint **Tools:** Git, Composer, GitHub Actions, Filament, Reverb, Laravel Echo

EDUCATION

University of the People	2020 – 2023
<i>BSc Computer Science, GPA 3.58</i>	<i>Remote, USA</i>
Kreativstorm	2024
<i>Software Engineering Program</i>	<i>Remote, Germany</i>
